Find Your Bird's Park

Range Maps of Prothonotary Warbler and Mew Gull.
Which can you find at Congaree? Could you see them today?

There are 59 National Parks scattered around the United States, American Samoa, and U.S. Virgin Islands. Did you know a large draw for National Parks are the birds? You won't find the same bird species in Florida and Alaska, so many visitors take this into account while they travel. The location of the park and their bird checklist along with bird species and their ranges are all taken into account when searching for an elusive bird.

Wings Across South Carolina 2016 Bioblitz

American Redstart (Left) and Horned Puffin (Right).
Can you guess what parks you might see these species?

National Parks and Other Recreational Areas of the United States. Highlighted in green are the 59 National Parks.
